#### Abstract

In this paper we extend the Fibonacci recurrence relation to define the sequence $\left\{\mathrm{C}_{\mathrm{n}}\right\}$ and derive some properties of this sequence. We also define the four comparison sequence $\left\{\mathrm{P}_{\mathrm{n}}\right\},\left\{\mathrm{Q}_{\mathrm{n}}\right\}$, $\left\{R_{n}\right\}$, $\left\{S_{n}\right\}$. We also obtain some identities with the help of generating matrix.

Key words: Fibonacci Number, Fibonacci Sequence
Mathematics Subject Classification: 11B39

## 1 Introduction

Waddili, M.E. ${ }^{10}$ has extended the Fibonacci recurrence relation to define the sequence $\left\{\mathrm{K}_{\mathrm{n}}\right\}$, where, $\mathrm{K}_{\mathrm{n}}=\mathrm{K}_{\mathrm{n}-1}+\mathrm{K}_{\mathrm{n}-2}+\mathrm{K}_{\mathrm{n}-3}, \quad \mathrm{n} \geq 3$ and $\mathrm{K}_{0}, \mathrm{~K}_{1}, \mathrm{~K}_{2}$ are given arbitrary algebraic integers.

Jaiswal, D.V.[8] has extended Fibonacci recurrence relation to define the sequence $\left\{Q_{n}\right\}$, where, $Q_{n}=Q_{n-1}+Q_{n-2}+Q_{n-3}+Q_{n-4}, \quad n \geq 4$ and, $Q_{0}, Q_{1}, Q_{2}$ are given arbitrary algebraic integers.

Harne, $\mathrm{S} .{ }^{7}$ has extended Fibonacci recurrence relation to define the sequence $\left\{\mathrm{D}_{\mathrm{n}}\right\}$, where,
This is an open access article under the CC BY-NC-SA license (https://creativecommons.org/licenses/by-nc-sa/4.0)

Manjeet Singh Teeth, et al., JUSPS-B Vol. 34(2), (2022).
$\mathrm{D}_{\mathrm{n}}=\mathrm{D}_{\mathrm{n}-1}+\mathrm{D}_{\mathrm{n}-2}+\mathrm{D}_{\mathrm{n}-3}+\mathrm{D}_{\mathrm{n}-4}+\mathrm{D}_{\mathrm{n}-5}, \quad \mathrm{n} \geq 5$
and, $\mathrm{D}_{0}, \mathrm{D}_{1}, \mathrm{D}_{2}$ are given arbitrary algebraic integers.
In this paper we shall further extend the Fibonacci recurrence relation ${ }^{3-6}$ to define the sequence $\left\{\mathrm{C}_{\mathrm{n}}\right\}$ and shall discuss some properties of this sequence. We shall also consider the four comparison sequence $\left\{P_{n}\right\},\left\{Q_{n}\right\},\left\{R_{n}\right\},\left\{S_{n}\right\}$.

2 The Generalized Sequence $\left\{C_{n}\right\}$ :
We consider the sequence, $\quad\left\{\mathrm{C}_{\mathrm{n}}\right\}=\mathrm{C}_{0}, \mathrm{C}_{1}, \mathrm{C}_{2}, \mathrm{C}_{3}, \ldots, \mathrm{C}_{\mathrm{n}}$
where, $\mathrm{C}_{0}, \mathrm{C}_{1}, \mathrm{C}_{2}, \mathrm{C}_{3}, \mathrm{C}_{4}, \mathrm{C}_{5}$ are arbitrary algebraic integers all of which are not zero and

$$
\begin{equation*}
C_{n}=C_{n-1}+C_{n-2}+C_{n-3}+C_{n-4}+C_{n-5}+C_{n-6}, \quad n \geq 6 \tag{2.1}
\end{equation*}
$$

We also consider the sequence $\left\{\mathrm{P}_{\mathrm{n}}\right\}=\mathrm{P}_{0}, \mathrm{P}_{1}, \mathrm{P}_{2}, \ldots, \mathrm{P}_{\mathrm{n}}$
where, $\mathrm{P}_{0}=\mathrm{C}_{3}-\mathrm{C}_{2}-\mathrm{C}_{1}-\mathrm{C}_{0}, \mathrm{P}_{1}=\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}-\mathrm{C}_{1}, \mathrm{P}_{2}=\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}$,

$$
\begin{equation*}
\mathrm{P}_{3}=\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3} \mathrm{P}_{4}=\mathrm{C}_{7}-\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4} \tag{2.2}
\end{equation*}
$$

with, $\mathrm{P}_{\mathrm{n}}=\mathrm{C}_{\mathrm{n}-1}+\mathrm{C}_{\mathrm{n}-2}+\mathrm{C}_{\mathrm{n}-3}+\mathrm{C}_{\mathrm{n}-4}+\mathrm{C}_{\mathrm{n}-5}, \quad \mathrm{n} \geq 5$
and $\quad\left\{\mathrm{Q}_{\mathrm{n}}\right\}=\mathrm{Q}_{0}, \mathrm{Q}_{1}, \mathrm{Q}_{2}, \ldots, \mathrm{Q}_{\mathrm{n}}$, where, $\mathrm{Q}_{0}=\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}-\mathrm{C}_{1}-\mathrm{C}_{0}$,

$$
\mathrm{Q}_{1}=\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}-\mathrm{C}_{1,} \quad \mathrm{Q}_{2}=\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}
$$

with, $\mathrm{Q}_{\mathrm{n}}=\mathrm{C}_{\mathrm{n}-1}+\mathrm{C}_{\mathrm{n}-2}+\mathrm{C}_{\mathrm{n}-3}+\mathrm{C}_{\mathrm{n}-4}$,
and $\quad\left\{\mathrm{R}_{\mathrm{n}}\right\}=\mathrm{R}_{0}, \mathrm{R}_{1}, \mathrm{R}_{2}, \ldots, \mathrm{R}_{\mathrm{n}}$
where, $\mathrm{R}_{0}=\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}-\mathrm{C}_{1}-\mathrm{C}_{0}, \quad \mathrm{R}_{1}=\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}-\mathrm{C}_{1}$
$\mathrm{R}_{2}=\mathrm{C}_{7}-\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}, \quad \mathrm{R}_{3}=\mathrm{C}_{8}-\mathrm{C}_{7}-\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3}$
$\mathrm{R}_{4}=\mathrm{C}_{9}-\mathrm{C}_{8}-\mathrm{C}_{7}-\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}$
with, $\mathrm{R}_{\mathrm{n}}=\mathrm{C}_{\mathrm{n}-1}+\mathrm{C}_{\mathrm{n}-2}+\mathrm{C}_{\mathrm{n}-3}, \mathrm{n} \geq 3$
and $\quad\left\{S_{n}\right\}=S_{0}, S_{1}, S_{2}, \ldots, S_{n}$
where, $\mathrm{S}_{0}=\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}-\mathrm{C}_{1}-\mathrm{C}_{0}, \quad \mathrm{~S}_{1}=\mathrm{C}_{7}-\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}-\mathrm{C}_{1}$

$$
\begin{align*}
& \quad \mathrm{S}_{2}=\mathrm{C}_{8}-\mathrm{C}_{7}-\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3}-\mathrm{C}_{2}, \quad \mathrm{~S}_{3}=\mathrm{C}_{9}-\mathrm{C}_{8}-\mathrm{C}_{7}-\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}-\mathrm{C}_{3} \\
& \mathrm{~S}_{4}=\mathrm{C}_{10}-\mathrm{C}_{9}-\mathrm{C}_{8}-\mathrm{C}_{7}-\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}  \tag{2.8}\\
& \text { with, } \quad \mathrm{S}_{\mathrm{n}}=\mathrm{C}_{\mathrm{n}-1}+\mathrm{C}_{\mathrm{n}-2}, \quad \mathrm{n} \geq 2 \tag{2.9}
\end{align*}
$$

From (2.1) and (2.3) we have for $\mathrm{n} \geq 11$

$$
\begin{aligned}
& \mathrm{P}_{\mathrm{n}}=\quad \mathrm{C}_{\mathrm{n}-2}+\mathrm{C}_{\mathrm{n}-3}+\mathrm{C}_{\mathrm{n}-4}+\mathrm{C}_{\mathrm{n}-5}+\mathrm{C}_{\mathrm{n}-6}+\mathrm{C}_{\mathrm{n}-7}+\mathrm{C}_{\mathrm{n}-3}+\mathrm{C}_{\mathrm{n}-4}+\mathrm{C}_{\mathrm{n}-5}+\mathrm{C}_{\mathrm{n}-6}+\mathrm{C}_{\mathrm{n}-7}+\mathrm{C}_{\mathrm{n}-8} \\
& +\mathrm{C}_{\mathrm{n}-4}+\mathrm{C}_{\mathrm{n}-5}+\mathrm{C}_{\mathrm{n}-6}+\mathrm{C}_{\mathrm{n}-7}+\mathrm{C}_{\mathrm{n}-8}+\mathrm{C}_{\mathrm{n}-9}+\mathrm{C}_{\mathrm{n}-5}+\mathrm{C}_{\mathrm{n}-6}+\mathrm{C}_{\mathrm{n}-7}+\mathrm{C}_{\mathrm{n}-8}+\mathrm{C}_{\mathrm{n}-9}+\mathrm{C}_{\mathrm{n}-10} \\
& \quad+\mathrm{C}_{\mathrm{n}-6}+\mathrm{C}_{\mathrm{n}-7}+\mathrm{C}_{\mathrm{n}-8}+\mathrm{C}_{\mathrm{n}-9}+\mathrm{C}_{\mathrm{n}-10}+\mathrm{C}_{\mathrm{n}-11} \\
& \mathrm{P}_{\mathrm{n}}=\mathrm{P}_{\mathrm{n}-1}+\mathrm{P}_{\mathrm{n}-2}+\mathrm{P}_{\mathrm{n}-3}+\mathrm{P}_{\mathrm{n}-4}+\mathrm{P}_{\mathrm{n}-5}+\mathrm{P}_{\mathrm{n}-6}
\end{aligned}
$$

Now, from equation (2.2) and (2.3),

$$
\begin{aligned}
& \mathrm{P}_{10}=\left(\mathrm{C}_{8}+\mathrm{C}_{7}+\mathrm{C}_{6}+\mathrm{C}_{5}+\mathrm{C}_{4}\right)+\left(\mathrm{C}_{7}+\mathrm{C}_{6}+\mathrm{C}_{5}+\mathrm{C}_{4}+\mathrm{C}_{3}\right)+\left(\mathrm{C}_{6}+\mathrm{C}_{5}+\mathrm{C}_{4}+\mathrm{C}_{3}+\mathrm{C}_{2}\right)+ \\
& \left(\mathrm{C}_{5}+\mathrm{C}_{4}+\mathrm{C}_{3}+\mathrm{C}_{2}+\mathrm{C}_{1}\right)+\left(\mathrm{C}_{4}+\mathrm{C}_{3}+\mathrm{C}_{2}+\mathrm{C}_{1}+\mathrm{C}_{0}\right)+\left(\mathrm{C}_{7}-\mathrm{C}_{6}-\mathrm{C}_{5}-\mathrm{C}_{4}\right) \\
& \mathrm{P}_{10}=\mathrm{P}_{9}+\mathrm{P}_{8}+\mathrm{P}_{7}+\mathrm{P}_{6}+\mathrm{P}_{5}+\mathrm{P}_{4}
\end{aligned}
$$

Similarly, $\quad \mathrm{P}_{9}=\mathrm{P}_{8}+\mathrm{P}_{7}+\mathrm{P}_{6}+\mathrm{P}_{5}+\mathrm{P}_{4}+\mathrm{P}_{3}, \quad \mathrm{P}_{8}=\mathrm{P}_{7}+\mathrm{P}_{6}+\mathrm{P}_{5}+\mathrm{P}_{4}+\mathrm{P}_{3}+\mathrm{P}_{2}$

$$
\begin{equation*}
P_{7}=P_{6}+P_{5}+P_{4}+P_{3}+P_{2}+P_{1} \tag{2.10}
\end{equation*}
$$

Hence, we have for $n \geq 6 \quad P_{n}=P_{n-1}+P_{n-2}+P_{n-3}+P_{n-4}+P_{n-5}+P_{n-6}$
Proceeding on similar lines, it can be shown that for $\mathrm{n} \geq 6$.
$\mathrm{Q}_{\mathrm{n}}=\mathrm{C}_{\mathrm{n}-2}+\mathrm{C}_{\mathrm{n}-3}+\mathrm{C}_{\mathrm{n}-4}+\mathrm{C}_{\mathrm{n}-5}+\mathrm{C}_{\mathrm{n}-6}+\mathrm{C}_{\mathrm{n}-7}+\mathrm{C}_{\mathrm{n}-3}+\mathrm{C}_{\mathrm{n}-4}+\mathrm{C}_{\mathrm{n}-5}+\mathrm{C}_{\mathrm{n}-6}+\mathrm{C}_{\mathrm{n}-7}+\mathrm{C}_{\mathrm{n}-8}$
$+C_{n-4}+C_{n-5}+C_{n-6}+C_{n-7}+C_{n-8}+C_{n-9}+C_{n-5}+C_{n-6}+C_{n-7}+C_{n-8}+C_{n-9}+C_{n-10}$
$\mathrm{Q}_{\mathrm{n}}=\mathrm{Q}_{\mathrm{n}-1}+\mathrm{Q}_{\mathrm{n}-2}+\mathrm{Q}_{\mathrm{n}-3}+\mathrm{Q}_{\mathrm{n}-4}+\mathrm{Q}_{\mathrm{n}-5}+\mathrm{Q}_{\mathrm{n}-6}$ for $\mathrm{n} \geq 6$
Proceeding on similar lines it can be shown that for $\mathrm{n} \geq 6$

$$
\begin{align*}
R_{n}= & C_{n-2}+C_{n-3}+C_{n-4}+C_{n-5}+C_{n-6}+C_{n-7}+C_{n-3}+C_{n-4}+C_{n-5}+C_{n-6}+C_{n-7}+C_{n-8} \\
& +C_{n-4}+C_{n-5}+C_{n-6}+C_{n-7}+C_{n-8}+C_{n-9} \\
R_{n}= & R_{n-1}+R_{n-2}+R_{n-3}+R_{n-4}+R_{n-5}+R_{n-6} \text { for } n \geq 6 \tag{2.12}
\end{align*}
$$

Proceeding on similar lines it can be shown that for $\mathrm{n} \geq 6$

$$
\begin{align*}
& S_{n}=C_{n-2}+C_{n-3}+C_{n-4}+C_{n-5}+C_{n-6}+C_{n-7}+C_{n-3}+C_{n-4}+C_{n-5}+C_{n-6}+C_{n-7}+C_{n-8} \\
& S_{n}=S_{n-1}+S_{n-2}+S_{n-3}+S_{n-4}+S_{n-5}+S_{n-6} \text { for } n \geq 6 \tag{2.13}
\end{align*}
$$

Thus, the four sequences $\left\{P_{n}\right\},\left\{Q_{n}\right\},\left\{R_{n}\right\}$ and $\left\{S_{n}\right\}$ are special cases of sequence $\left\{C_{n}\right\}$ and all obtained by taking different initial values $[1,2,9]$.

$$
\begin{aligned}
& \text { On taking, } \quad \mathrm{C}_{0}=\mathrm{C}_{1}=\mathrm{C}_{2}=0, \mathrm{C}_{3}=\mathrm{C}_{4}=1, \mathrm{C}_{5}=2, \mathrm{C}_{0}=\mathrm{C}_{1}=0, \mathrm{C} 2=1, \mathrm{C}_{3}=0, \mathrm{C}_{4}=1, \mathrm{C}_{5} \\
& =2, \mathrm{C}_{0}=0, \mathrm{C}_{1}=1, \mathrm{C}_{2}=\mathrm{C}_{3}=0, \mathrm{C}_{4}=1, \mathrm{C}_{5}=2, \mathrm{C}_{0}=1, \mathrm{C}_{1}=\mathrm{C}_{2}=\mathrm{C}_{3}=0, \mathrm{C}_{4}=1, \mathrm{C}_{5}=2, \mathrm{C}_{0}=\mathrm{C}_{2}=\mathrm{C}_{2} \\
& =\mathrm{C}_{3}=0, \mathrm{C}_{4}=1, \mathrm{C}_{5}=2 \\
& 0,0,0,1,1,2,4,8,16,32,63, \ldots \mathrm{~J}_{n}, \ldots \\
& 0,0,1,0,1,2,4,8,16,31,62, \ldots \mathrm{~K}_{\mathrm{n}}, \ldots \\
& 0,1,0,0,1,2,4,8,15,30,59, \ldots \mathrm{~L}_{\mathrm{n}}, \ldots \\
& 1,0,0,0,1,2,4,7,14,28,56, \ldots \mathrm{M}_{\mathrm{n}}, \ldots \\
& 0,0,0,0,1,2,3,6,12,24,48, \ldots \mathrm{~N}_{\mathrm{n}}, \ldots
\end{aligned}
$$

Here, we find that
$\mathrm{K}_{\mathrm{n}}=\mathrm{J}_{\mathrm{n}-1}+\mathrm{J}_{\mathrm{n}-2}+\mathrm{J}_{\mathrm{n}-3}+\mathrm{J}_{\mathrm{n}-4}+\mathrm{J}_{\mathrm{n}-5}, \quad \mathrm{~L}_{\mathrm{n}}=\mathrm{J}_{\mathrm{n}-1}+\mathrm{J}_{\mathrm{n}-2}+\mathrm{J}_{\mathrm{n}-3}+\mathrm{J}_{\mathrm{n}-4}$
$\mathrm{M}_{\mathrm{n}}=\mathrm{J}_{\mathrm{n}-1}+\mathrm{J}_{\mathrm{n}-2}+\mathrm{J}_{\mathrm{n}-3}, \quad \mathrm{~N}_{\mathrm{n}}=\mathrm{J}_{\mathrm{n}-1}+\mathrm{J}_{\mathrm{n}-2}$
Hence, we say that $\left\{J_{n}\right\}$ is $C_{n}$ type sequence, while $\left\{K_{n}\right\}$ is $P_{n}$ type sequence, and $\left\{L_{n}\right\}$ is $Q_{n}$
type sequence, while $\left\{M_{n}\right\}$ is $R_{n}$ type sequence, and $\left\{N_{n}\right\}$ is $S_{n}$ type sequence.
3 Linear Sums And Some Properties We have derived simple properties of the sequence $\left\{\mathrm{C}_{\mathrm{n}}\right\}$, $\left\{\mathrm{P}_{\mathrm{n}}\right\},\left\{\mathrm{Q}_{\mathrm{n}}\right\},\left\{\mathrm{R}_{\mathrm{n}}\right\},\left\{\mathrm{S}_{\mathrm{n}}\right\}$ expressing each of the terms $\mathrm{C}_{6}, \mathrm{C}_{7}, \mathrm{C}_{8}, \ldots, \mathrm{C}_{\mathrm{n}+5}$ as the sum of its six preceding terms as given in (2.1) adding both sides we obtained on simplification -

$$
\begin{array}{r}
\sum_{i=0}^{n} C_{i}=1 / 5\left\{C_{n+5}-C_{n+3}-2 C_{n+2}-3 C_{n+1}+C_{n}\right. \\
\left.-\left(C_{5}-C_{3}-2 C_{2}-3 C_{1}-4 C_{0}\right)\right\} \tag{3.1}
\end{array}
$$

On using (2.1), (2.2), (2.4), (2.6) and (2.8), we get

$$
\begin{aligned}
& \sum_{i=0}^{n} C_{6 i}=\sum_{i=0}^{6 n-1} C_{i}+C_{0}, \sum_{i=0}^{n} C_{6 i+2}=\sum_{i=0}^{6 n+1} C_{i}+P_{0}, \sum_{i=0}^{n} C_{6 i+3}=\sum_{i=0}^{6 n+2} C_{i}+Q_{0} \\
& \sum_{i=0}^{n} C_{6 i+4}=\sum_{i=0}^{6 n+3} C_{i}+R_{0}, \sum_{i=0}^{n} C_{6 i+5}=\sum_{i=0}^{6 n+4} C_{i}+S_{0}, \sum_{i=0}^{n} C_{6 i+6}=\sum_{i=0}^{6 n+5} C_{i}+\left(S_{1}-C_{0}\right) \\
& \sum_{i=0}^{n} C_{6 i+5}=\sum_{i=0}^{6 n+4} C_{i}+\left(R_{1}-C_{0}\right), \sum_{i=0}^{n} C_{6 i+4}=\sum_{i=0}^{6 n+3} C_{i}+\left(Q_{-1}-C_{0}\right), \sum_{i=0}^{n} C_{6 i+3}= \\
& \sum_{i=0}^{6 n+2} C_{i}+\left(P_{1}-C_{0}\right)
\end{aligned}
$$

## 4 Property of Sequence $\left\{J_{n}\right\}$

Theorem: For the sequence $\left\{\mathrm{J}_{\mathrm{n}}\right\}$ we have,

$$
\left|\begin{array}{cccccc}
J_{n} & J_{n+1} & J_{n+2} & J_{n+3} & J_{n+4} & J_{n+5}  \tag{4.1}\\
\mathrm{~J}_{\mathrm{n}+1} & \mathrm{~J}_{\mathrm{n}+2} & \mathrm{~J}_{\mathrm{n}+3} & \mathrm{~J}_{\mathrm{n}+4} & \mathrm{~J}_{\mathrm{n}+5} & \mathrm{~J}_{\mathrm{n}+6} \\
\mathrm{~J}_{\mathrm{n}+2} & \mathrm{~J}_{\mathrm{n}+3} & \mathrm{~J}_{\mathrm{n}+4} & \mathrm{~J}_{\mathrm{n}+5} & \mathrm{~J}_{\mathrm{n}+6} & \mathrm{~J}_{\mathrm{n}+7} \\
\mathrm{~J}_{\mathrm{n}+3} & \mathrm{~J}_{\mathrm{n}+4} & \mathrm{~J}_{\mathrm{n}+5} & \mathrm{~J}_{\mathrm{n}+6} & \mathrm{~J}_{\mathrm{n}+7} & \mathrm{~J}_{\mathrm{n}+8} \\
\mathrm{~J}_{\mathrm{n}+4} & \mathrm{~J}_{\mathrm{n}+5} & \mathrm{~J}_{\mathrm{n}+6} & \mathrm{~J}_{\mathrm{n}+7} & \mathrm{~J}_{\mathrm{n}+8} & \mathrm{~J}_{\mathrm{n}+9} \\
\mathrm{~J}_{\mathrm{n}+5} & \mathrm{~J}_{\mathrm{n}+6} & \mathrm{~J}_{\mathrm{n}+7} & \mathrm{~J}_{\mathrm{n}+8} & \mathrm{~J}_{\mathrm{n}+9} & \mathrm{~J}_{\mathrm{n}+10}
\end{array}\right|=(-1)_{{ }_{n+1}}
$$

Proof : Consider the determinant -

$$
\Delta=\left|\begin{array}{llllll}
1 & 1 & 1 & 1 & 1 & 1 \\
1 & 0 & 0 & 0 & 0 & 0 \\
0 & 1 & 0 & 0 & 0 & 0 \\
0 & 0 & 1 & 0 & 0 & 0 \\
0 & 0 & 0 & 1 & 0 & 0 \\
0 & 0 & 0 & 0 & 1 & 0
\end{array}\right|, \quad \Delta^{2}=\left|\begin{array}{cccccc}
2 & 2 & 2 & 2 & 2 & 2 \\
1 & 1 & 1 & 1 & 1 & 1 \\
1 & 0 & 0 & 0 & 0 & 0 \\
0 & 1 & 0 & 0 & 0 & 0 \\
0 & 0 & 1 & 0 & 0 & 0 \\
0 & 0 & 0 & 1 & 0 & 0
\end{array}\right|
$$

Now, by mathematical induction,

$$
\Delta^{n}=\left|\begin{array}{cccccc}
J_{n+1} & K_{n+1} & L_{n+1} & M_{n+1} & N_{n+1} & J_{n} \\
J_{n} & K_{n} & L_{n} & M_{n} & N_{n} & J_{n-1} \\
J_{n-1} & K_{n-1} & L_{n-1} & M_{n-1} & N_{n-1} & J_{n-2} \\
J_{n-2} & K_{n-2} & L_{n-2} & M_{n-2} & N_{n-2} & J_{n-3} \\
J_{n-3} & K_{n-3} & L_{n-3} & M_{n-3} & N_{n-3} & J_{n-4} \\
J_{n-4} & K_{n-4} & L_{n-4} & M_{n-4} & N_{n-4} & J_{n-5}
\end{array}\right|
$$

Now, writing $\mathrm{N}_{\mathrm{n}+1}=\mathrm{J}_{\mathrm{n}}+\mathrm{J}_{\mathrm{n}-1}$ the R.H.S. can be written as the sum of two determinants, one of which is zero, Therefore,

$$
\Delta^{n}=\left|\begin{array}{cccccc}
J_{n+1} & K_{n+1} & L_{n+1} & M_{n+1} & J_{n-1} & J_{n} \\
J_{n} & K_{n} & L_{n} & M_{n} & J_{n-2} & J_{n-1} \\
J_{n-1} & K_{n-1} & L_{n-1} & M_{n-1} & J_{n-3} & J_{n-2} \\
J_{n-2} & K_{n-2} & L_{n-2} & M_{n-2} & J_{n-4} & J_{n-3} \\
J_{n-3} & K_{n-3} & L_{n-3} & M_{n-3} & J_{n-5} & J_{n-4} \\
J_{n-4} & K_{n-4} & L_{n-4} & M_{n-4} & J_{n-6} & J_{n-5}
\end{array}\right|
$$

Now, writing $M_{n+1}=J_{n}+J_{n-1}+J_{n-2}$, the R.H.S. can be written as the sum of three determinants, two of which are zero. Therefore,

$$
\Delta^{n}=\left|\begin{array}{cccccc}
J_{n+1} & K_{n+1} & L_{n+1} & J_{n-2} & J_{n-1} & J_{n} \\
J_{n} & K_{n} & L_{n} & J_{n-3} & J_{n-2} & J_{n-1} \\
J_{n-1} & K_{n-1} & L_{n-1} & J_{n-4} & J_{n-3} & J_{n-2} \\
J_{n-2} & K_{n-2} & L_{n-2} & J_{n-5} & J_{n-4} & J_{n-3} \\
J_{n-3} & K_{n-3} & L_{n-3} & J_{n-6} & J_{n-5} & J_{n-4} \\
J_{n-4} & K_{n-4} & L_{n-4} & J_{n-7} & J_{n-6} & J_{n-5}
\end{array}\right|
$$

Now, writing $L_{n+1}=J_{n}+J_{n-1}+J_{n-2}+J_{n-3}$, the R.H.S. can be written as the sum of four determinants, three of which are zero. Therefore,

$$
\Delta^{n}=\left|\begin{array}{cccccc}
\mathrm{J}_{\mathrm{n}+1} & \mathrm{~K}_{\mathrm{n}+1} & \mathrm{~J}_{\mathrm{n}-3} & \mathrm{~J}_{\mathrm{n}-2} & \mathrm{~J}_{\mathrm{n}-1} & \mathrm{~J}_{\mathrm{n}} \\
\mathrm{~J}_{\mathrm{n}} & \mathrm{~K}_{\mathrm{n}} & \mathrm{~J}_{\mathrm{n}-4} & \mathrm{~J}_{\mathrm{n}-3} & \mathrm{~J}_{\mathrm{n}-2} & \mathrm{~J}_{\mathrm{n}-1} \\
\mathrm{~J}_{\mathrm{n}-1} & \mathrm{~K}_{\mathrm{n}-1} & \mathrm{~J}_{\mathrm{n}-5} & \mathrm{~J}_{\mathrm{n}-4} & \mathrm{~J}_{\mathrm{n}-3} & \mathrm{~J}_{\mathrm{n}-2} \\
\mathrm{~J}_{\mathrm{n}-2} & \mathrm{~K}_{\mathrm{n}-2} & \mathrm{~J}_{\mathrm{n}-6} & \mathrm{~J}_{\mathrm{n}-5} & \mathrm{~J}_{\mathrm{n}-4} & \mathrm{~J}_{\mathrm{n}-3} \\
\mathrm{~J}_{\mathrm{n}-3} & \mathrm{~K}_{\mathrm{n}-3} & \mathrm{~J}_{\mathrm{n}-7} & \mathrm{~J}_{\mathrm{n}-6} & \mathrm{~J}_{\mathrm{n}-5} & \mathrm{~J}_{\mathrm{n}-4} \\
\mathrm{~J}_{\mathrm{n}-4} & \mathrm{~K}_{\mathrm{n}-4} & \mathrm{~J}_{\mathrm{n}-8} & \mathrm{~J}_{\mathrm{n}-7} & \mathrm{~J}_{\mathrm{n}-6} & \mathrm{~J}_{\mathrm{n}-5}
\end{array}\right|
$$

Now, writing $K_{n+1}=J_{n}+J_{n-1}+J_{n-2}+J_{n-3}+J_{n-4}$ the R.H.S. can be written as the sum of five determinants, four of which are zero. Therefore,

$$
\Delta^{n}=\left|\begin{array}{cccccc}
J_{n+1} & J_{n-4} & J_{n-3} & J_{n-2} & J_{n-1} & J_{n} \\
J_{n} & J_{n-5} & J_{n-4} & J_{n-3} & J_{n-2} & J_{n-1} \\
J_{n-1} & J_{n-6} & J_{n-5} & J_{n-4} & J_{n-3} & J_{n-2} \\
\mathrm{~J}_{n-2} & \mathrm{~J}_{n-7} & J_{n-6} & J_{n-5} & J_{n-4} & J_{n-3} \\
\mathrm{~J}_{n-3} & \mathrm{~J}_{n-8} & J_{n-7} & J_{n-6} & J_{n-5} & J_{n-4} \\
\mathrm{~J}_{n-4} & \mathrm{~J}_{n-9} & J_{n-8} & J_{n-7} & J_{n-6} & J_{n-5}
\end{array}\right|
$$

On arranging, we get

$$
\Delta^{n}=\left|\begin{array}{cccccc}
\mathrm{J}_{\mathrm{n}+1} & \mathrm{~J}_{\mathrm{n}} & \mathrm{~J}_{\mathrm{n}-1} & \mathrm{~J}_{\mathrm{n}-2} & \mathrm{~J}_{\mathrm{n}-3} & \mathrm{~J}_{\mathrm{n}-4} \\
\mathrm{~J}_{\mathrm{n}} & \mathrm{~J}_{\mathrm{n}-1} & \mathrm{~J}_{\mathrm{n}-2} & \mathrm{~J}_{\mathrm{n}-3} & \mathrm{~J}_{\mathrm{n}-4} & \mathrm{~J}_{\mathrm{n}-5} \\
\mathrm{~J}_{\mathrm{n}-1} & \mathrm{~J}_{\mathrm{n}-2} & \mathrm{~J}_{\mathrm{n}-3} & \mathrm{~J}_{\mathrm{n}-4} & \mathrm{~J}_{\mathrm{n}-5} & \mathrm{~J}_{\mathrm{n}-6} \\
\mathrm{~J}_{\mathrm{n}-2} & \mathrm{~J}_{\mathrm{n}-3} & \mathrm{~J}_{\mathrm{n}-4} & \mathrm{~J}_{\mathrm{n}-5} & \mathrm{~J}_{\mathrm{n}-6} & \mathrm{~J}_{\mathrm{n}-7} \\
\mathrm{~J}_{\mathrm{n}-3} & \mathrm{~J}_{\mathrm{n}-4} & \mathrm{~J}_{\mathrm{n}-5} & \mathrm{~J}_{\mathrm{n}-6} & \mathrm{~J}_{\mathrm{n}-7} & \mathrm{~J}_{\mathrm{n}-8} \\
\mathrm{~J}_{\mathrm{n}-4} & \mathrm{~J}_{\mathrm{n}-5} & \mathrm{~J}_{\mathrm{n}-6} & \mathrm{~J}_{\mathrm{n}-7} & \mathrm{~J}_{\mathrm{n}-8} & \mathrm{~J}_{\mathrm{n}-9}
\end{array}\right|
$$

Putting, $\mathrm{n}-9=\mathrm{m}$ or $\mathrm{n}=\mathrm{m}+9$ and substituting all the $\Delta$ 's, we obtain,

$$
(-1)^{\mathrm{m}+9}=\left|\begin{array}{cccccc}
\mathrm{J}_{\mathrm{m}+10} & \mathrm{~J}_{\mathrm{m}+9} & \mathrm{~J}_{\mathrm{m}+8} & \mathrm{~J}_{\mathrm{m}+7} & \mathrm{~J}_{\mathrm{m}+6} & \mathrm{~J}_{\mathrm{m}+5} \\
\mathrm{~J}_{\mathrm{m}+9} & \mathrm{~J}_{\mathrm{m}+8} & \mathrm{~J}_{\mathrm{m}+7} & \mathrm{~J}_{\mathrm{m}+6} & \mathrm{~J}_{\mathrm{m}+5} & \mathrm{~J}_{\mathrm{m}+4} \\
\mathrm{~J}_{\mathrm{m}+8} & \mathrm{~J}_{\mathrm{m}+7} & \mathrm{~J}_{\mathrm{m}+6} & \mathrm{~J}_{\mathrm{m}+5} & \mathrm{~J}_{\mathrm{m}+4} & \mathrm{~J}_{\mathrm{m}+3} \\
\mathrm{~J}_{\mathrm{m}+7} & \mathrm{~J}_{\mathrm{m}+6} & \mathrm{~J}_{\mathrm{m}+5} & \mathrm{~J}_{\mathrm{m}+4} & \mathrm{~J}_{\mathrm{m}+3} & \mathrm{~J}_{\mathrm{m}+2} \\
\mathrm{~J}_{\mathrm{m}+6} & \mathrm{~J}_{\mathrm{m}+5} & \mathrm{~J}_{\mathrm{m}+4} & \mathrm{~J}_{\mathrm{m}+3} & \mathrm{~J}_{\mathrm{m}+2} & \mathrm{~J}_{\mathrm{m}+1} \\
\mathrm{~J}_{\mathrm{m}+5} & \mathrm{~J}_{\mathrm{m}+4} & \mathrm{~J}_{\mathrm{m}+3} & \mathrm{~J}_{\mathrm{m}+2} & \mathrm{~J}_{\mathrm{m}+1} & \mathrm{~J}_{\mathrm{m}}
\end{array}\right|
$$

Rearranging the determinant and replace $m$ by $n$ we get the required result (4.1).
5 Generating Matrix $\left\{C_{n}\right\}$ :
Now, we obtain some identities with the help of generating matrix, we consider the matrix,

$$
[\mathrm{T}]=\left|\begin{array}{llllll}
1 & 1 & 1 & 1 & 1 & 1  \tag{5.1}\\
1 & 0 & 0 & 0 & 0 & 0 \\
0 & 1 & 0 & 0 & 0 & 0 \\
0 & 0 & 1 & 0 & 0 & 0 \\
0 & 0 & 0 & 1 & 0 & 0 \\
0 & 0 & 0 & 0 & 1 & 0
\end{array}\right|
$$

By mathematical induction we can show that -

$$
\begin{align*}
& {[T]^{n}=\left|\begin{array}{cccccc}
J_{n+1} & K_{n+1} & L_{n+1} & M_{n+1} & N_{n+1} & J_{n} \\
J_{n} & K_{n} & L_{n} & M_{n} & N_{n} & J_{n-1} \\
J_{n-1} & K_{n-1} & L_{n-1} & M_{n-1} & N_{n-1} & J_{n-2} \\
J_{n-2} & K_{n-2} & L_{n-2} & M_{n-2} & N_{n-2} & J_{n-3} \\
J_{n-3} & K_{n-3} & L_{n-3} & M_{n-3} & N_{n-3} & J_{n-4} \\
J_{n-4} & K_{n-4} & L_{n-4} & M_{n-4} & N_{n-4} & J_{n-5}
\end{array}\right| \quad \text { where, } n \geq 5}  \tag{5.2}\\
& {\left[C_{n}, C_{n-1}, C_{n-2}, C_{n-3}, C_{n-4}, C_{n-5}\right]=[T]^{n-5}\left[C_{5}, C_{4}, C_{3}, C_{2}, C_{1}, C_{0}\right]}  \tag{5.3}\\
& \text { On using (5.2) and (5.3), we get - } \\
& {\left[\begin{array}{c}
C_{n+P} \\
C_{n+P-1} \\
C_{n+P-2} \\
C_{n+P-3} \\
C_{n+P-4} \\
C_{n+P-5}
\end{array}\right]=\left[\begin{array}{cccccc}
J_{n+1} & K_{n+1} & L_{n+1} & M_{n+1} & N_{n+1} & J_{n} \\
J_{n} & K_{n} & L_{n} & M_{n} & N_{n} & J_{n-1} \\
J_{n-1} & K_{n-1} & L_{n-1} & M_{n-1} & N_{n-1} & J_{n-2} \\
J_{n-2} & K_{n-2} & L_{n-2} & M_{n-2} & N_{n-2} & J_{n-3} \\
J_{n-3} & K_{n-3} & L_{n-3} & M_{n-3} & N_{n-3} & J_{n-4} \\
J_{n-4} & K_{n-4} & L_{n-4} & M_{n-4} & N_{n-4} & J_{n-5}
\end{array}\right]\left[\begin{array}{c}
C_{n} \\
C_{n-1} \\
C_{n-2} \\
C_{n-3} \\
C_{n-4} \\
C_{n-5}
\end{array}\right]}
\end{align*}
$$

From this we obtain -

$$
\begin{equation*}
C_{n+P}=J_{P+1} D_{n}+K_{P+1} D_{n-1}+L_{P+1} D_{n-2}+M_{P+1} D_{n-3}+N_{P+1} D_{n-4}+J_{n} D_{n-5} \tag{5.4}
\end{equation*}
$$

Let us now consider the matrix [W] which is transpose of the matrix [T] in,

$$
[\mathrm{W}]=[\mathrm{T}]^{\prime}=\left|\begin{array}{cccccc}
1 & 1 & 0 & 0 & 0 & 0 \\
1 & 0 & 1 & 0 & 0 & 0 \\
1 & 0 & 0 & 1 & 0 & 0 \\
1 & 0 & 0 & 0 & 1 & 0 \\
1 & 0 & 0 & 0 & 0 & 1 \\
1 & 0 & 0 & 0 & 0 & 0
\end{array}\right| \text { It can be shown that the sequence, }
$$

$$
\begin{equation*}
\mathrm{C}_{4}, \mathrm{P}_{5}, \mathrm{Q}_{5}, \mathrm{R}_{5}, \mathrm{~S}_{5}, \mathrm{C}_{5}, \ldots, \mathrm{C}_{\mathrm{n}-1}, \mathrm{P}_{\mathrm{n}}, \mathrm{Q}_{\mathrm{n}} \mathrm{R}_{\mathrm{n}}, \mathrm{~S}_{\mathrm{n}}, \mathrm{C}_{\mathrm{n}} \tag{5.5}
\end{equation*}
$$

It is generated by matrix [W]
$\left[C_{n}, P_{n}, Q_{n}, R_{n}, S_{n}, C_{n-1}\right]=[W]^{n-5}\left[C_{5}, P_{5}, Q_{5}, R_{5}, S_{5}, C_{4}\right], n \geq 5$
On using (5.5) and (5.6), we get $\left[C_{n+p}, P_{n+P}, Q_{n+p}, R_{n+p}, S_{n+p}, C_{n+P-1}\right]$

$$
\begin{gathered}
=[W]^{n+P-5}\left[C_{5}, P_{5}, Q_{5}, R_{5}, S_{5}, C_{4}\right], \quad n \geq 5 \\
=[W]^{P} \quad\left[C_{n}, P_{n}, Q_{n}, R_{n}, S_{n}, C_{n-1}\right] \\
=\left[\begin{array}{cccccc}
J_{P+1} & J_{P} & J_{P-1} & J_{P-2} & J_{P-3} & J_{P-4} \\
K_{P+1} & K_{P} & \mathrm{~K}_{P-1} & K_{P-2} & K_{P-3} & K_{P-4} \\
L_{P+1} & L_{P} & L_{P-1} & L_{P-2} & L_{P-3} & L_{P-4} \\
M_{P+1} & M_{P} & M_{P-1} & M_{P-2} & M_{P-3} & M_{P-4} \\
N_{P+1} & N_{P} & N_{P-1} & N_{P-2} & N_{P-3} & N_{P-4} \\
J_{P} & J_{P-1} & J_{P-2} & J_{P-3} & J_{P-4} & J_{P-5}
\end{array}\right]\left[\begin{array}{c}
C_{n} \\
P_{n} \\
Q_{n} \\
R_{n} \\
S_{n} \\
C_{n-1}
\end{array}\right] \\
C_{n+P}=J_{P+1} C_{n}+J_{P} P_{n}+J_{P-1} Q_{n}+J_{P-2} R_{n}+J_{P-3} S_{n}+J_{P-4} C_{n-1} \\
P_{n+P}=K_{P+1} C_{n}+K_{P} P_{n}+K_{P-1} Q_{n}+K_{P-2} R_{n}+K_{P-3} S_{n}+K_{P-4} C_{n-1} \\
Q_{n+P}=L_{P+1} C_{n}+L_{P} P_{n}+L_{P-1} Q_{n}+L_{P-2} R_{n}+L_{P-3} S_{n}+L_{P-4} C_{n-1} \\
R_{n+P}= \\
M_{P+1} C_{n}+M_{P} P_{n}+M_{P-1} Q_{n}+M_{P-2} R_{n}+M_{P-3} S_{n}+M_{P-4} C_{n-1} \\
S_{n+P}=
\end{gathered}
$$

## Conclusion and its application

There are many known identities for Fibonacci recursion relation. We define the sequence $\left\{\mathrm{C}_{\mathrm{n}}\right\}$ and its four comparison sequence $\left\{\mathrm{P}_{\mathrm{n}}\right\},\left\{\mathrm{Q}_{\mathrm{n}}\right\},\left\{\mathrm{R}_{\mathrm{n}}\right\}$, $\left\{\mathrm{S}_{\mathrm{n}}\right\}$. We derive linear sum and properties of comparison sequence. We also derive generating matrix for $\left\{\mathrm{C}_{\mathrm{n}}\right\}$.

## Acknowledgement

The authors would like to thank the referee for their very helpful and detailed comments.

## Scope of the future work

More than four comparison sequence can be defined and new relationship have been derived.
